

LectureDoc2 Cheat Sheet

Information

Author: Michael Eichberg
Version: August 2024

Vertical Titles

Add the class `vertical-title` to rotate the title and to change the layout of the slide to a column-based layout. To get back to a row based layout add a container with the class `width-100`.

Example

```
.. class:: vertical-title
```

```
<Slide Title>  
-----
```

```
.. container:: width-100
```

```
<Row based content layout.>
```

Slide Tweaks

Slide without Title

To hide the title of a slide assign the class `no-title`.

Smaller Slide Titles

Use the class `smaller-slide-title`.

Vertically Centered Content

Use the class `center-child-elements`.

Example

```
.. class:: center-child-elements  
          no-title  
          smaller-slide-title
```

```
Hidden on the slide!  
-----
```

```
<Slide Content>
```

Sections and Subsections

Create a slide that marks the beginning of a new section or subsection by adding the class `new-section` or `new-subsection` to the slide.

Exercises and Solutions

Associate the class `exercises` with a slide to indicate that the slide contains an exercise.

Use the directive `.. exercise::` to add an exercise. To add a solution use the custom directive `.. solution::` inside of an exercise block and specify the password (optional) using the attribute `:pwd:.`

Example (Solution in supplemental information)

```
.. exercise:: <Title>
```

```
<Description of the exercise.>
```

```
.. solution:: <Title>
   :pwd: 1234
```

<Solution>

You can configure a master-password using meta information:

```
.. meta::
   :master-password: <Master-password>
```

Table of Contents

A navigable table of contents can be created using standard `rst` techniques.

Example

Table of Contents

```
- `Section 1 Title`_
- `Subsection 1.1 Title`_
```

Footnotes

[#] _ and .. [#] create footnotes.

Test\ [#]_

```
.. [#] `test.org`
```

Explicit Footers

A container with the class `footer-left`, `footer-right` or `block-footer`.

References

Use standard `rst` references.

Example

```
...
Like described in [Eic24]_ ...
...
```

References

```
.. [Eic24] LectureDoc2; 2024
```

Copy to Clipboard

Add `copy-to-clipboard` to a code block to enable copying code to the clipboard.

Example

```
.. code:: java
   :class: copy-to-clipboard

   public static void main(...)
```

Fade-out Content

Add the class `fade-out` to a container to whiten the content.

Supplemental Information

Use the directive `supplemental` for respective information.

Example

```
.. supplemental::
```

<Text>

Text Alignment

Control text alignment: `text-align-[left|center|right]`

Images

Adding a drop-shadow and rounded corners: `picture`.

Tables

The layout can be adapted using: `compact`, `compact-cells`, `no-table-borders`, `no-inner-borders`, `no-column-borders`, `fake-header[-2nd]-row` and `fake-header[-2nd]-column`.

Animation

`incremental` (and `wobble`).

`highlight-line-on-hover` (always usable), `highlight-on-hover` (explicit column or row headers are not supported) or `highlight-identical-cells`

Lists

■ `list-with-explanations` renders text paragraphs of list items less pronounced.

(As shown here.)

■ Use `impressive` to make the list more impressive:

■ Add `negative-list` to use " ! " for bullet points.

■ Add `positive-list` to use "✓" for bullet points.

Example

- Point 1

```
.. class:: negative-list list-with-explanations
```

- Point 2

Some on-slide explanation.

```
.. class:: positive-list
```

- Point 3

Decorations

`line-above` draws a horizontal lines.

`box-shadow` adds a shadow.

`rounded-corners` the corners will be rounded.

Example

```
.. container:: margin-top-1em  
                  line-above  
                  padding-top-1em  
                  box-shadow
```

Text

Font Styling

"rem" based relative sizes: `xxl`, `huge`, `large`, `small`, `footnotesize`, `scriptsize`, `tiny`, `x-tiny`, `xx-tiny`

"em" based relative sizes: `larger`, `smaller`, `far-smaller`

Font weight: `bold`, `light`, `thin`

Font family: `monospaced, serif`

Font style: `italic`

Slide Transitions

Available slide transitions: `transition-move-left`, `transition-scale`,
`transition-fade`, `transition-move-to-top`

Example

```
.. class:: transition-move-left
```

```
<Slide Title>  
-----
```

Revealing Slide Content

All elements with the class `incremental` are revealed incrementally.

Example

```
.. class:: incremental
```

```
- Item 1 - Part 1  
  :incremental: Item 1 - Part 2  
- Item 2
```

Column-based Layouts

Use `two-columns` and `three-columns` for respective layouts.

Example

```
.. container:: two-columns
```

```
.. container:: column no-separator
```

```
<Column 1>
```

```
.. container:: column
```

```
<Column 2>
```

Add `no-default-width` to the root container for content based column widths. Use class `no-separator` on the left column to remove the separator.

Stacked Layouts

Stacked layouts are based on nested layers. Each layer - except of the first one - needs to have the class `incremental` and/or the class `overlay` for transparent layers. (Up to 10 layers are supported.) To turn off the numbering of opaque layers use `.no-number`.

Images in Stacked Layouts

To avoid that a parent element of a floating element is collapsed add the class `clearfix` to the parent element; i. e., when a layer just contains a floating image.

Example

```
.. deck::
```

```
.. card:: clearfix
```

```
.. image:: <pl.svg>  
  :align: left
```

```
.. card:: overlay

.. image:: <p2.svg>

.. card:: warning

<Content>
```

Semantic-based Text Markup

peripheral: for less important text. obsolete: for obsolete statements. ger: to markup German Words. eng: to markup English words.

Box sizes

Use width-100% and width-75% to control the width of a container.

Colors (roles)

Font Colors

red, gray, light-gray, blue, green, orange, black, shiny-green, shiny-red, dark-red

Background Colors

red-background, dhw-gray-background, dhw-light-gray-background, white-background, blue-background, light-green-background, green-background, yellow-background

Example

```
:dhw-red: Red Text.
```

Fine-grained Control (Try to avoid!)

margin-none, margin-0-5em, margin-1em, margin-top-1em, margin-top-2em, margin-bottom-1em, margin-bottom-2em, margin-right-1em, margin-left-1em, padding-none, padding-0-5em, padding-1em, padding-top-1em, padding-top-2em

Hiding slides (⚠ rst2ld only)

Use hide-slide to exempt it from slide generation.

Example

```
.. class:: hide-slide

<Hidden Slide >
-----
```

Configuration

LectureDoc meta information:

id The unique identifier for the slide set. Required to store the current state of the presentation.

slide-dimensions the slides dimension (default: "1920x1200").

first-slide Determines the first slide that is shown (e.g., <Slide Number> or "last-viewed").

Example

```
.. meta::
: id: <unique id>
: slide-dimensions: 2560x1440
: first-slide: last-viewed
```

Cheat Sheets with LD²

A cheat-sheet is a slide with the class `cheat-sheet-8-columns`.

Template

```
.. class:: cheat-sheet-8-columns

<Title>
-----

.. container:: cheat-sheet-block

.. rubric:: <TOPIC>

.. rubric:: <SUB-TOPIC>
```

Useful Role and Substitution Definitions
